Name: «Yntymak»

Description:
   The aim of the project is to create a website for restaurant which is called «Yntymak». The web site must include the feature of online table's reservation and meal's ordering from online menu. In addition project includes android appplication that is needed for ordering meal at the moment of sitting at restaurant without help of waiter. Such application will avoid the problem of long waiting of waiter, and also it is very comfortable and fast for both sides, customer and restaurant.

Languages/Platforms:
   Web site: HTML, CSS, PHP, Java Script, Jquery, SQL.
   Android application: Android, IDE Eclipse.

Complexity:
   Complexity is enough high because of two different types of application which will contain difficult functionality of reliable synchronization between customer and restaurant.

Customer: Name: Burankulov Almas
   Contact number: +77714504354
   Address: Almaty region, Esik city
